- Adds a gloss finish to floor

Product base	Water-based
Drying time	Approx. 2 hrs
Application tools	Applicator pad
Coverage rate	Approx 40 m ² /Lt
Size	1 Lt

How to Apply

Dust

Remove dust from the floor using a super electrostatic Bona Microfiber Dusting Cloth, or by gently vacuuming. Clean the floor using Bona Wood Floor Cleaner or Bona Stone, Tile & Laminate Cleaner.

Note: The floor should be completely dry and clean before application as dirt left on the floor will become trapped.

Shake

Shake the bottle gently for 30 seconds and allow it to stand for a few minutes before use.

Apply

Thoroughly wet the Bona Applicator Pad with the product and apply a wavy line of product on the floor. Work in manageable sections (2-3 metres).

Smooth

Even out the applied product by drawing the applicator pad smoothly across the floor. Using Refresher on timber floors go with the grain of the wood, using Polish on hard surface floors apply in a single direction. Continue the process until the entire floor has been coated. Ensure an even appearance and sheen by observing the coverage rate.

Drying

Allow at least 2 hours to dry before walking on the floor. Avoid heavy traffic and replacing furniture; For Polish 12hrs, Refresher 24hrs.

Note: If the floor has previously been maintained with polish or wax this may affect the adhesion of Bona products. If in doubt, do a trial application on a test area. **Bona Refresher will increase the sheen on existing matt or extra matt surfaces.**
